

SKREDDY PEDALS™

**ROVER**

**FUZZ™**

***Vintage fuzz tones with wide range from tight and dynamic to wooly and compressed***

**Touch sensitive—reacts to your playing**

**Cleans up with the guitar volume super nice; you can make it sound as polite or rude as you want**

***Level:*** You will find unity gain no problem, and a huge amount of volume boost is available.

***Attack:*** This is your fuzz control. Huge sustain all the way up and plenty of usable medium-gain tones elsewhere.

***Wool:*** This is a powerful voice control. Clockwise, the sound is compressed, woolly, sustainy, just like a vintage Tone Bender. Counter-clockwise, the sound is tight, articulate, cutting, and dynamic. Throughout the range of this knob, you'll find vintage Fuzz Face type sounds as well.

## **Power**

All Skreddy Pedals accept the industry-standard 9v DC plug (5.5mm barrel x 2.1mm center coax), with the center being negative and the barrel being positive. Please use a quality, regulated, filtered power supply.

9v battery is not included. To install or change a battery, remove the bottom cover using a Phillips screw driver. To prevent a battery (if you use one) from draining while the pedal is not in use, remember to un-plug the input cable from the pedal's input jack. The battery is also disconnected from the circuit when an adapter is plugged into the DC jack.

**Power consumption:** ~1 or 2mA @ 9 volts

## **Service**

Email Skreddy Pedals at [marc@skreddypedals.com](mailto:marc@skreddypedals.com) if your pedal needs repair.
